

Self evaluation 34315

Group part

Group: 16

Topic	Yes	No
Has handed in report	X	
Has handed in video	X	
Has handed in logbook	X	
Has handed in code as .zip	X	
Has handed in poster	X	
Has described who did what in project	X	
Has described who did what in report	X	

Prototype requirements	Yes	No
Uses wifi communication	X	
Min 1 analog sensor (write which: LM35)	X	
Min 1 digital sensor (write which: HC-SR04)	X	
Min 1 actuation (write which: 2 steppermotors (from the kit))	X	
Uses display (which form: OLED 1.54")	X	
Uses Thingspeak	X	
Uses Webserver	x	

Report content	Excellent	Good	Fair	Poor
Executive Summary:				
Clarity and Conciseness: Is the summary clear and concise, effectively summarizing the project's purpose and objectives?		X		
Alignment with Objectives: Does the summary align with the overall goals of the IoT prototyping project?		X		
Comprehensive Overview: Does the summary provide a comprehensive overview of the project, including its significance and potential impact?		X		
Problem statement (pain):				
Identification of Problem: Does the report clearly identify the problem or challenge that the IoT prototype aims to address?		X		
Relevance: Is the problem statement relevant and well-defined in the context of IoT prototyping?		X		
Depth of Analysis: Does the group demonstrate a thorough understanding of the problem and its implications? Have they talked to potential users?		X		

Solution:				
Innovation and Creativity: Does the proposed solution demonstrate innovation and creativity in addressing the identified problem?		X		
Feasibility: Is the solution technically feasible within the scope of IoT prototyping?	X			
Practicality: Does the solution offer practical benefits and address the needs of potential users?		X		
Technical Highlights, Risks, Key Challenges, System Design, etc.:				
Technical Proficiency: Does the group exhibit a strong understanding of relevant technical concepts and methodologies?		X		
Risk Assessment: Are potential risks and challenges associated with the project identified and addressed effectively?		X		
System Design: Is the system design well-thought-out and logically structured to support the project's objectives?	X			
Presentation of Data to the User:				
User-Centric Design: Does the presentation of data prioritize user experience and usability?		X		
Clarity and Accessibility: Are data visualizations and interfaces presented in a clear and accessible manner for users?	X			
Integration with IoT Framework: Does the presentation of data effectively leverage IoT technologies and frameworks?		X		

General comments about the report:

We think the report gives a clear and honest picture of the project, both the parts that work well and the things we would do differently. It gets a bit technical in some sections, but we tried to keep the structure easy to follow. Writing it together also helped us agree on how the system actually works.

General comments about the poster:

The poster was fulfilling and gave an easy-to-read understanding of our project. Maybe a bit too technical, but the easy layout made up for it in our opinion.

General comments about the prototype:

Prototype is working as intended, but we learned through the process of several improvements to be done in the future. Both design/mechanical-wise and on extra features.

General comments about the log-book:

We haven't tried using a log book before in other courses, we are unsure of how much we have gained from it, but at the end of the project it is pretty clear that it gives a view of how we work and who did

what.

We skipped the “What to do before next time”-part when we started meeting everyday, as we generally spend so many hours that there wasn’t any time to do anything worthwhile until we met again.

General comments about our group and our working methodology:

We believe that we have all contributed equally, there has been a good teamwork throughout the process. And we have all had a lot of fun with the project.

How many members were in the group:

6

If the group had 100 tokens to distribute amongst them to honour the overall contribution to the project, how would they be distributed amongst the group members:

Equally 😊

It is our belief that all 6 of us contribute very positively to each other’s strengths and weaknesses

Is this distribution consistent with the distribution of tasks described in the report?

Yes

If not, please explain the deviation.
